The AI usage atlas.

A complete view of the agents, models and repositories behind the project.

Oct 10 - Oct 12, 2026 / AMERICA/NEW_YORK

28.32B	209,429	$8,503.11
TOKENS PROCESSED	USAGE RECORDS	API-EQUIVALENT VALUE

Project-attributed local coding-agent usage. Estimated API value is not an invoice or actual subscription spend.

WORKING DIRECTORIES

Where the estimated value sits

97.19%

of all tokens were cached reads.

Caching dominates the workload. The $65,885.43 uncached-price difference is a pricing counterfactual, not cash saved on a subscription.

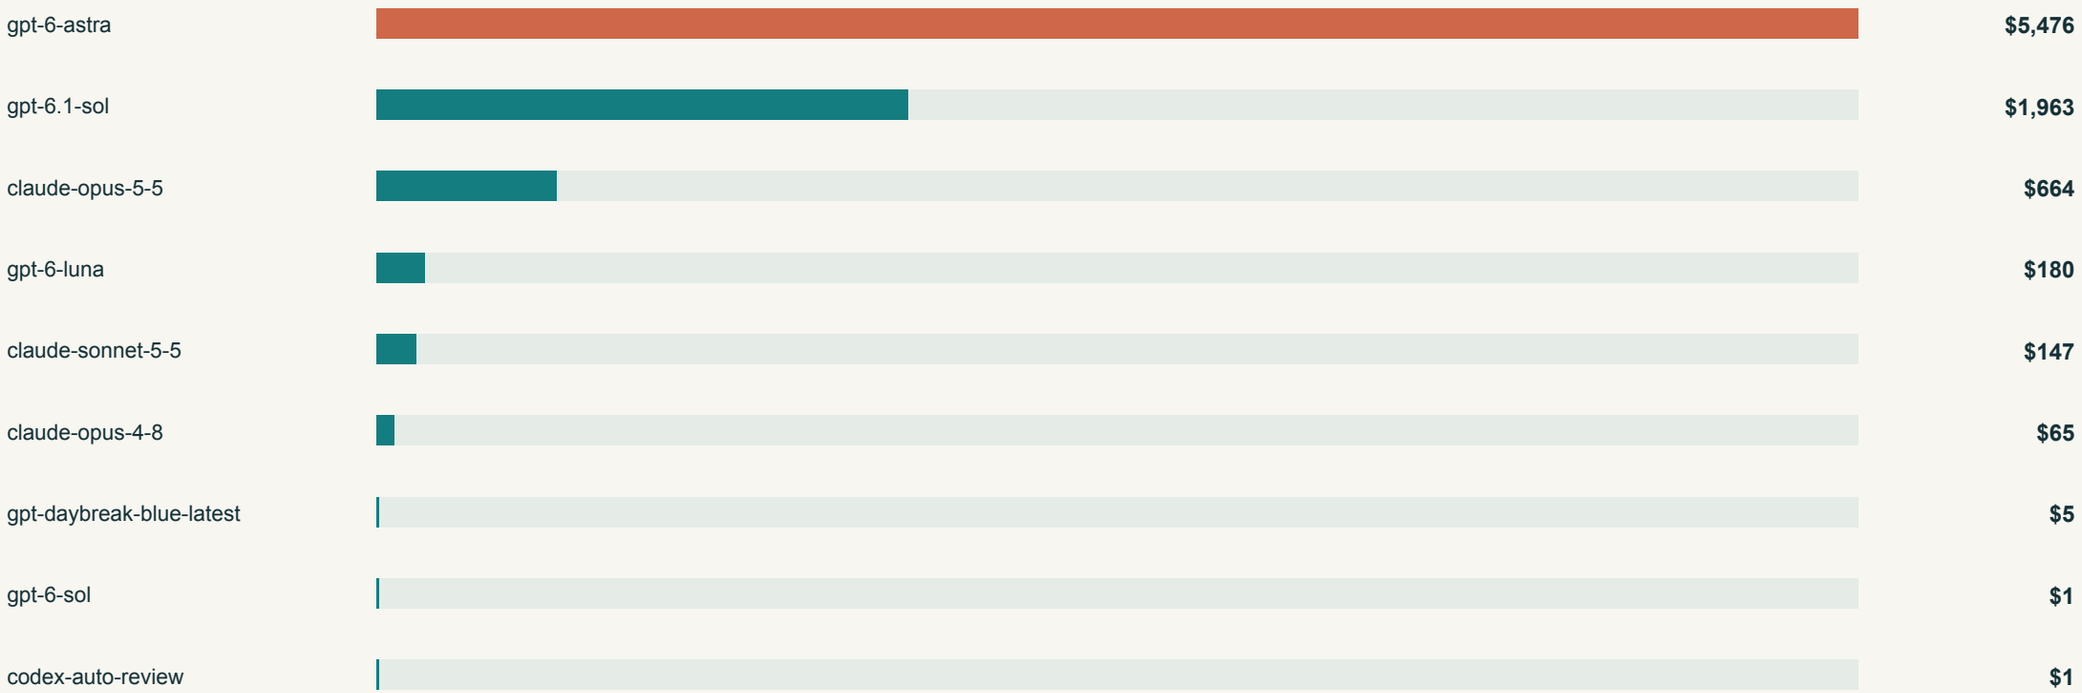

SINCE THE PREVIOUS SNAPSHOT

+211 records +0.04B tokens +$21.19 estimated value

Different models, different economics

Model value reflects the configured rates, token mix and context length. It is not a measure of quality.

Estimated API value by model

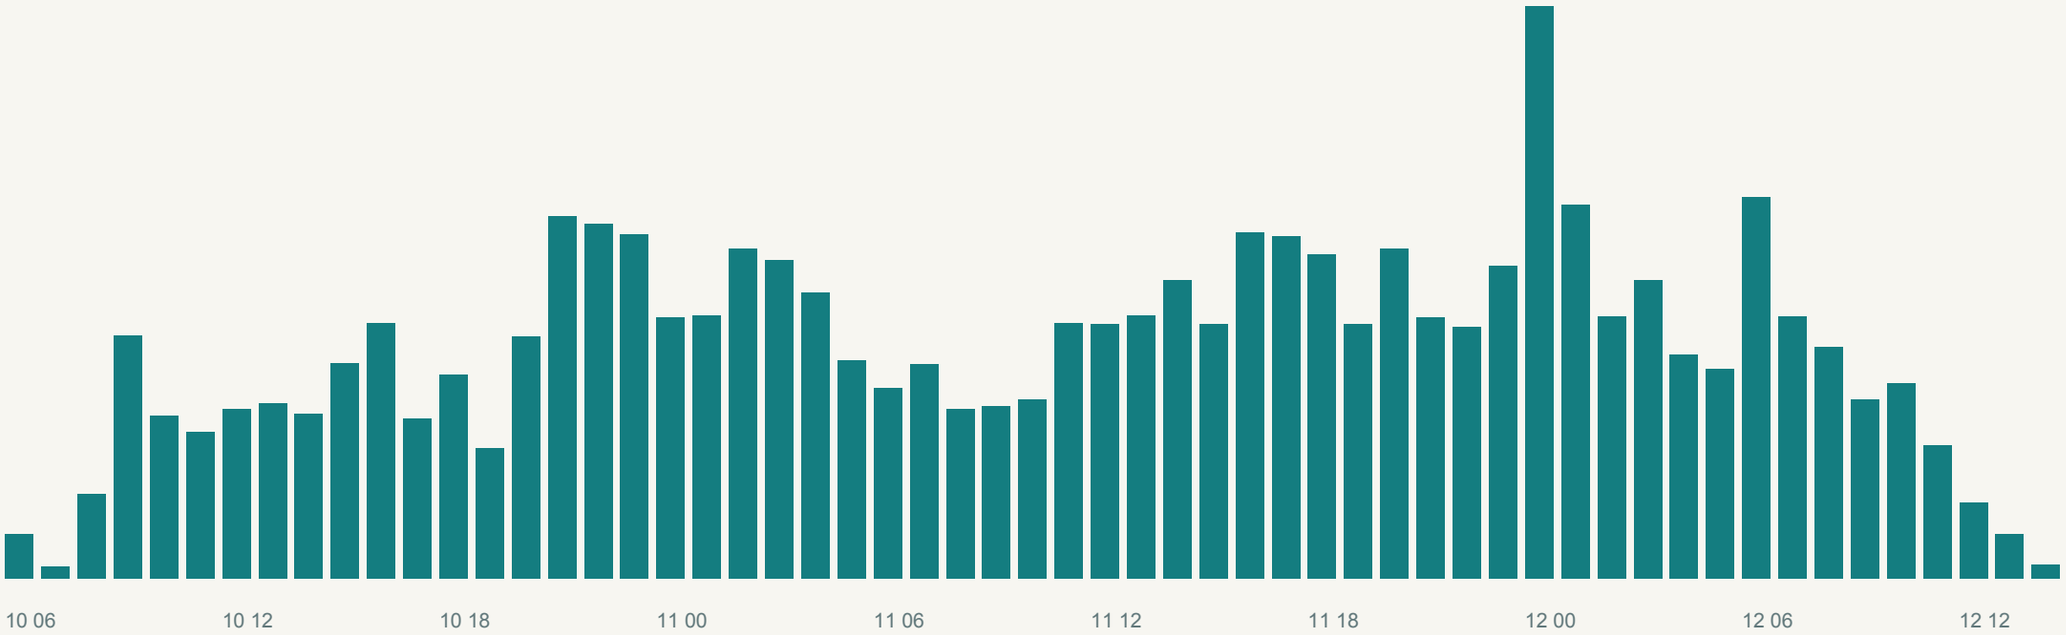

gpt-6-astra contributes most of the estimated value; gpt-6.1-sol processes the largest token volume. Compare both measures before drawing conclusions about model efficiency.

Pricing caveat: codex-auto-review and gpt-daybreak-blue-latest use explicit GPT-5.6 Sol assumptions. Standard pricing excludes Fast/priority and regional premiums.

When the work happened

Hourly usage in Eastern time. This profile measures recorded tokens, not active labor hours.

Peak hour: 2026-10-12 00:00 ET

X: day + hour / Y: token volume, scaled to the peak hour

2026-10-10

7.40B tokens

59,344 records / $2,564.11

2026-10-11

13.54B tokens

101,864 records / $3,531.94

2026-10-12

7.37B tokens

48,221 records / $2,407.06

36. Scope, definitions & limitations

01 Scope: local coding-agent records attributed to Jevelopers-neatHack-2026. 955 selected source files; 951 contain billable-token records. Other users, machines, remote services and runtime API calls without local agent records are not covered.

02 Window: 2026-10-10T06:09:05.045000-04:00 through 2026-10-12T14:34:36.303000-04:00. All derived calendar tables use America/New_York. This is a snapshot of active logs, not a completeness guarantee.

03 Amounts are standard API-equivalent estimates using the preserved October 11 pricing snapshot, not invoices or subscription charges. Fast/priority and regional premiums are excluded. Assumed and mapped model rates are disclosed separately; an exact model row does not independently verify its price.

04 Cache savings is an uncached-price counterfactual, not money actually saved on a subscription. Reasoning tokens are a subset of output and are not added again. Cache write TTL fields may be unavailable; zero in an optional TTL field means no recorded allocation.

05 Repository attribution uses organization Git remotes, current or previously verified worktrees, and recognizable repository paths. Historical mappings preserve attribution for removed worktrees. Shared organization work remains unallocated. Session selection also uses explicit project-task evidence and linked children; mixed-project sessions may require manual allocation.

06 Prompt capture, raw-log archiving, credential reading, other profiles/drives, remote hosts and scheduled refresh remain off. 13 ambiguous Claude sources were excluded. No prompt text is included in these exports.

07 Codex counters: 101/104 main and 536/537 child sessions agree within 2%. 4 exceptions are listed in the counter section; live counters, branch segments and truncation can differ. These are validation flags, not corrections to force agreement.

08 The project scanner corrects rapid child-call replay undercount while preserving copied-session replay detection. 8 zero-token synthetic Claude records are excluded. Claude stats-cache predates this project and cannot independently reconcile this window.

09 Session counts use tool + host + recorded session ID. Claude child logs can reuse a parent ID, so session totals are not the number of agents. The complete source-segment appendix distinguishes log files. Session spans describe first-to-last records, not labor or compute duration.

Scope & limitations / continued

10 Account labels are local pseudonymous groupings; identity confidence is low. Recorded plan names do not establish payer, invoice amount or subscription allocation. Actual spend, ROI, productivity, provider-wide totals and task-content analysis cannot be inferred from these records.

11 All 34 partition tables reconcile exactly to total calls and tokens and within one cent to event-level estimated cost. Percentiles use nearest rank. Per-call CSV includes every usage record; the PDF prints the 30 highest estimated-cost records and all session and source-segment aggregates.

12 Organization repositories with no directly attributed records: entire-checkpoints, Jevelopers-GetTicketStub.com-Submission. Absence is not proof of zero usage.

37. Session distributions

Native analyzer interpolated percentiles. Hours are record spans, not active labor. Cost in estimated USD.

TOOL / MEASURE	N	MIN	MEAN	P50	P90	P99	MAX

40. Context pricing tiers

Long-context thresholds use complete input, including cache reads and writes.

MODEL / TIER	RECORDS	TOKENS M	EST. USD
gpt-6-astra | base / no context tier	30,195	3,687.57	$5,476.33
gpt-6.1-sol | base / no context tier	65,913	8,987.36	$1,424.56
claude-opus-5-5 | base / no context tier	10,779	1,813.78	$663.85
gpt-6.1-sol | long context	6,310	2,050.67	$538.70
gpt-6-luna | base / no context tier	91,778	10,932.27	$179.45
claude-sonnet-5-5 | base / no context tier	3,575	717.81	$146.79
claude-opus-4-8 | base / no context tier	637	108.25	$65.47
gpt-daybreak-blue-latest | base / no context tier	180	11.04	$5.28
gpt-6-sol | base / no context tier	38	3.69	$1.36
codex-auto-review | base / no context tier	15	0.89	$0.99
gpt-6-luna | long context	9	3.26	$0.33

41. Cost by token category

Components use the same model rates and context tiers as the event ledger. Reasoning is part of output.

TOKEN CATEGORY	EST. USD	VALUE SHARE
uncached_input	**$1,620.37**	**19.06%**
cache_read	**$5,428.87**	**63.85%**
cache_write_5m	**$110.04**	**1.29%**
cache_write_1h	**$146.42**	**1.72%**
output	**$1,197.41**	**14.08%**

42. Attribution evidence

Workspace evidence anchors a session to a repository. Task and parent inference needs more judgment; neither proves every call was exclusively project work.

EVIDENCE CLASS	RECORDS	TOKENS M	EST. USD
workspace / Git evidence	**194,264**	**25,902.59**	**$7,647.34**
task / parent inference	**15,165**	**2,414.00**	**$855.77**

43. Pricing evidence

Assumed rates contribute $6.27, or 0.074% of estimated value. Dated rates remain a preserved snapshot, not a new price verification.

EVIDENCE CLASS	RECORDS	TOKENS M	EST. USD
dated snapshot	**208,597**	**28,196.40**	**$8,431.37**
bundled / undated	**637**	**108.25**	**$65.47**
assumed	**195**	**11.93**	**$6.27**
